UPGRADATION OF EXISTING LICENSE FOR GENE SPRING SOFTWARE

PROPRIETY ITEM—

- The software should have the ability to analyse SNP Genotyping (GT/CNV/LOH), Methylation (M) array data, Gene Expression (GX), miRNA expression, exon splicing analysis, SNP association analysis, copy number analysis and RTPCR data **across different microarray platforms.**
- The software should be capable for doing **pathway analysis** for the gene expression data & target scan for miRNA.
- The software should be capable of **multi-omic data analysis** like microarray data, DNA & RNA sequencing, transcriptomics, genomics, proteomics and metabolomics data
- The software should have the feature for visualizing and analyzing **methylation and Chip-on chip data.**
- It can also combine methylation data with gene expression profiling experiments within the same project for correlation between levels of methylated sites (beta values) and differential gene expression levels (P-values), where combined statistics are shown and integrated plots can be generated.
- The software should have the feature for Methylation data to be combined with gene expression profiling experiments within the same project for correlation between levels of methylated sites (beta values) and differential gene expression levels (P-values), where combined statistics are shown and integrated plots can be generated. **The upgrades should be free of cost for 3 yrs (license for 3 yrs)**
- Results from single-site resolution data should be visualized as line plots, bar graphs, scatter plots, frequency plots, pie charts, histograms, dendrograms, box plots, or heat maps.
- The software should provide flexibility to determine protein analyte concentration using a standards curve, or differential protein expression levels between samples and protein levels can be compared to mRNA expression levels.
- The software should also be capable of integrating **into free web based custom array designing software**, provided with powerful QC tool and algorithm for data visualization
- The software should provide flexibility to determine protein analyte concentration using a standards curve, or differential protein expression levels between samples and protein levels can be compared to mRNA expression levels. The software should have cited more than 12,000 references in Google Scholar.
